WEATHER KEY POINTS

12/09/21 - 12/15/21

Thursday-Wednesday

- Periods of rain and higher Sierra snow are expected through Thursday night, especially south of Interstate 80, with up to 12" of new snow across the central Sierra and lighter amounts for the northern and southern Sierra.
 - Snow levels will range from around 2,500 feet over far northern California to either side of 4,500 feet across the northern and central Sierra.
 - No widespread significant impacts are expected from this precipitation as much of it will be beneficial.
 - Gusty winds of 35 to 55 mph are expected at times across the Sierra and southern California mountains through Thursday evening.
- A significant weather system is likely for much of the state by late in the weekend and into the middle of next week, with persistent rounds of rain, mountain snow, and gusty winds.
 - Snow levels will lower considerably through early next week, even into southern California.
 - Heavy rain and snow look likely for Northern California, with one to three inches of rain possible in the valleys of Northern California and several feet of snow possible in the Sierras during this event.
 - Rain will also reach Southern California, with up to one and a half inches of rain possible across coastal Southern California. Any snow accumulation across Southern California mountains should be light.
 - The heavy rain and snow will raise the threat for flash flooding, river flooding, mudslides/debris flows, and travel hazards across the region.
